

Complete and Partial Denture Care

Daily brushing with a large brush will help preserve the denture in optimal condition for a long time. Care for the remaining teeth is essential to keep a partial denture fitting well.

Your partial will only be as good as your natural teeth. If your natural teeth are neglected, your partial will not fit as well.

Repair spots that show signs of failure. It is always easier to fix a small problem than a large problem. If your denture starts breaking down, it should be repaired.

Do not wear dentures at night. Your

gums need a chance to breathe. Covering the gums at night will lead to gum swelling and inflammation.

Wear your dentures. People who go for long periods without wearing their dentures will find that they often don't fit as well afterwards.

This is because the gums change shape and the other teeth might move. Also, the tongue gets larger in a person who doesn't wear dentures for a long time.

Let us adjust them when needed. Your dentures should fit comfortably and work

reasonably well.

If you have any concerns, be sure to let us know.
